### EXECUTIVE SUMMARY

This is the twelfth and final edition of the state-by-state snapshots issued by the Joint Economic Committee during the 111<sup>th</sup> Congress. While the November jobs report released by the Bureau of Labor Statistics was less optimistic than October's report, recent economic news appears promising. Data for November showed a solid increase in retail sales over the month, a rebound in industrial production, and a rise in new homebuilding, which all bode well for the labor market. At the same time, consumer prices increased modestly in November, and the core measure of inflation (which excludes food and energy prices) rose only 0.1% in November, following three months of no change.

This month's report shows the progress states have made creating jobs and reducing unemployment since the beginning of the year. Highlights include:

- Forty-six states and the District of Columbia added private sector jobs between January and November 2010. The District of Columbia saw the largest expansion of private sector payrolls, expanding by 4.0% in the first eleven months of 2010 and performing significantly better than the national average of 1.1% growth. A number of other states have expanded private sector payrolls by more than 2% in 2010, including Oklahoma (2.7%); Texas (2.5%); Minnesota (2.3%); Arkansas (2.2%); North Dakota (2.1%); Louisiana (2.1%); and Indiana (2.0%).
- Only four states did not experience a net increase in private sector jobs during the first eleven months of 2010. Those states are New Mexico (-0.3%, -1,700 jobs); Rhode Island (-0.5%, -2,000 jobs); Missouri (-0.7%, -15,100 jobs); and Nevada (-1.9%, -18,600 jobs).
- The manufacturing sector added 114,000 jobs since the start of the year (a 1.0% increase in employment), despite a rocky and uneven recovery. Several states with large manufacturing sectors saw consistent increases in production employment. For example, Texas's manufacturing sector gained jobs in almost every month of 2010, expanding by 3.2% in 2010 and adding 25,900 jobs. Employment within Ohio's manufacturing sector grew by 2.9% over the same period, adding 17,600 jobs. Other Midwestern states that saw large expansions in their manufacturing sectors in 2010 include Michigan (3.1%, 13,700 jobs); Minnesota (4.4%, 12,700 jobs); Illinois (1.7%, 9,600 jobs); Indiana (1.8%, 7,500 jobs); and Iowa (3.2%, 6,400 jobs).<sup>1</sup>
- The professional and business services sector added 373,000 jobs this year (a 2.3% increase in employment). Thirty-nine states and the District of Columbia added jobs in the professional and business services sector from January to

November 2010. California gained jobs in this sector in each of the first eleven months of 2010 for a total gain of 55,600 jobs this year. The growth in California's professional and business services sector (2.8%) exceeds the national average (2.3%). Other states whose professional and business services sectors expanded in 2010 include Indiana (10.6%, 27,800 jobs); Mississippi (9.0%, 7,500 jobs); Iowa (7.0%, 8,200 jobs); and the District of Columbia (6.4%, 9,600 jobs). Texas (5.5%, 67,100 jobs) and New York (2.7%, 28,900 jobs) also gained a substantial number of jobs in the professional and business services sector, although the gains in those states as a share of employment within the industry were not as large as in other states.

- The leisure and hospitality sector added 183,000 jobs this year (a 1.4% increase in employment). Gains in the leisure and hospitality sector were uneven over 2010. In July 2010, 37 states and the District of Columbia added jobs in the leisure and hospitality sector. More recently, in November 2010, 23 states and the District of Columbia added to their leisure and hospitality sectors.

### *Comparing Recent U.S. Recessions and Recoveries*

In addition to the state-level data on employment, unemployment, earnings, and the housing sector for the first 11 months of 2010, this packet provides maps, figures, and tables (see pages 6-10) that compare the 2007-09 recession and current recovery to the three previous recessions and recoveries.

The differential impact of the four most recent recessions on different states and regions of the country is clearly illustrated in Figures 1 – 4 by comparing the states colored a brighter orange (indicating a state whose job losses were greater than the national average during the recession) with the lighter orange states (which are states that still lost jobs during the recession, but less than the national average) and green states that actually expanded their payrolls during the recession. The differential impact of the recessions on regions is also shown in Tables 1 and 2. Table 1 shows the rise in the state unemployment rate during the recessions and percent drop in payroll employment. Table 2 shows the percent change in per capita income and house prices in each state over the four recessions.

While the trough in economic activity occurred in June 2009, the economy continued to lose jobs on a national level until the end of 2009.<sup>2</sup> It has not been unusual for job losses to continue into the recovery following recent U.S. recessions—the economy continued to shed jobs after the 2001 recession and the 1990-91 recession. The recovery in 2010 appears more robust than it appeared in the second half of 2009, especially when controlling for the demobilization of decennial Census workers in the second half of 2010. While only 26 states and the District of Columbia show private sector job gains to date from the end of the recession, 46 states plus the District of Columbia have gained private sector jobs in 2010 thus far.

The differential impact of the recession can be attributed to differences in the magnitude of the shocks experienced by the states. Two major shocks precipitated the 2007-09 recession: the collapse of the housing market and the financial crisis. High oil prices also contributed to the recession by lowering consumer spending on goods other than transportation, and by reducing the demand for automobiles. Figure 1 shows that the 2007-09 recession hit almost every state, with job losses in all but North Dakota, Alaska and the District of Columbia. However, as the map shows, the impact was deepest in manufacturing states in the Midwest and South, and in the housing boom states in the Sunbelt (e.g., California, Florida, Arizona, and Nevada).

Comparing the 2007-09 recession to previous recessions shows that this recession was far deeper in terms of job losses than any of the four previous recessions—national job losses were 5.3% in the 2007-09 recession versus job losses of 1.2%, 1.1% and 3.1% respectively for the previous three recessions. (See Figures 2, 3, and 4.) In addition, while the vast majority of states were affected by employment declines in the 2001 and 1982-83 recessions, the magnitude of losses during the 2007-09 recession were far greater in nearly every state. Even in the 1981-82 recession—which was previously considered the deepest post-World War II recession—job losses averaged only 3.1% on a national basis, compared with 5.3% in the 2007-09 recession. In the 1981-82 recession, only nine states experienced job losses of 5% or more. During the 2007-09 recession, 21 states experienced job losses of 5% or higher, including Nevada, which lost 11.6% of its jobs.

Another difference between the 2007-09 recession and the previous three recessions was the breadth of the impact of the recession. During the 2001 recession, Maryland and the District of Columbia continued to gain jobs, along with the less-populated states of Wyoming, Nebraska and New Mexico. Throughout much of the Northeast and Mid-Atlantic regions, job losses during the 2001 recession were modest, with many states losing only a small percent of their jobs: New Jersey (-0.1%); Virginia (-1.2%); Pennsylvania (-1.2%). Many states in the South experienced similar modest job losses. While Georgia lost 2.0% of its jobs, most of the heavily populated states were hit lightly, such as: Florida (-0.4%) and Texas (-1.1%).

The severity of the 2007-09 recession is even more dramatic when contrasted with the 1990-91 recession (Figure 3). During the 1990-91 recession, many states in the center of the country continued to gain jobs as the economy contracted, while the East Coast and California were badly hit.

Table 2 reveals one important distinction between the four most recent recessions. The 2007-09 recession was the first to have a national housing market collapse with national price levels falling. Previously, housing bubbles were localized phenomena, affecting only small areas of the country. For example, the Northeast and California experienced a housing collapse during the 1990-91 recession.<sup>3</sup>

Finally, despite the severity of job losses during the Great Recession, the current labor market recovery is outpacing the last two recoveries (See Figures 5 and 6).<sup>4</sup> A focus on

private-sector job growth during this recovery as compared to the last two recoveries illuminates this point. In all three recoveries, the labor market continued to shed jobs even after economic activity accelerated. However, private sector job growth in the current recovery began substantially sooner than in the recovery from the 1990-1991 recession and in the recovery from the 2001 recession. The private sector began adding jobs 16 months after the official end to the Great Recession, in comparison with 18 months after the 1990-1991 recession and 30 months after the 2001 recession. Total non-farm job growth during the current recovery has been less steady, but this unevenness is due almost entirely to declines in government-sector employment. Much of this decline in government employment is explained by the expiration of temporary jobs collecting Census data this summer.

As this analysis shows, the recovery from the Great Recession continues, and is occurring more quickly than the recoveries from the 2001 and 1990-1991 recessions. While the recovery looks different across states, nearly all states have added jobs from January to November of 2010. Although the number of new homes started and the number of new permits issued remain near historic lows, suggesting that states with large construction sectors may experience slower job growth even as the recovery progresses, recent retail sales and industrial production data suggest that private-sector job gains will continue in many states in 2011.

---

<sup>1</sup> Data for Wisconsin's manufacturing sector for November was unavailable at this time. However, Wisconsin's manufacturing sector had expanded 3.2% by October 2010, adding 13,200 jobs.

<sup>2</sup> In November 2009, the economy gained 75,000 private sector jobs (64,000 total nonfarm jobs). In 2010, the private sector gained jobs in every month, although total nonfarm jobs saw a net loss in many months due to winding down of the temporary hiring for the 2010 Census.

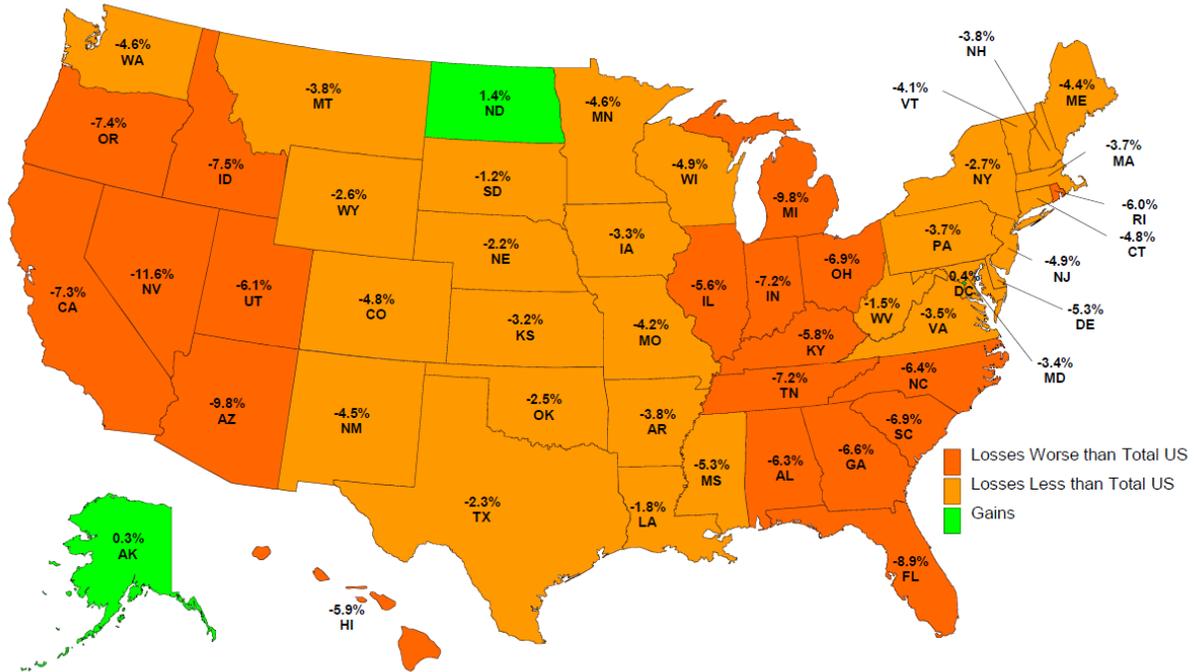

<sup>3</sup> In order to compare recessions, we used the Federal Housing Finance Agency House Price Index, adjusted for seasonality by Haver Analytics. This data underestimates the housing price decline during the 2007-09 recession since it does not include subprime loans or jumbo mortgages. The FHFA index shows that home prices declined by 6% on a national basis between the fourth quarter of 2007 and the 2<sup>nd</sup> quarter of 2010. The S&P Case-Shiller Index, which includes nonconforming loans and is thought to be more accurate, shows a 28.5% decline in national home prices over the same period. However, the FHFA price index is the only state-by-state index available back to 1980.

<sup>4</sup> The 1981-82 recovery was unique due to the economic circumstances causing the recession.

## Economic Overview And Outlook: Alabama

### JOBS

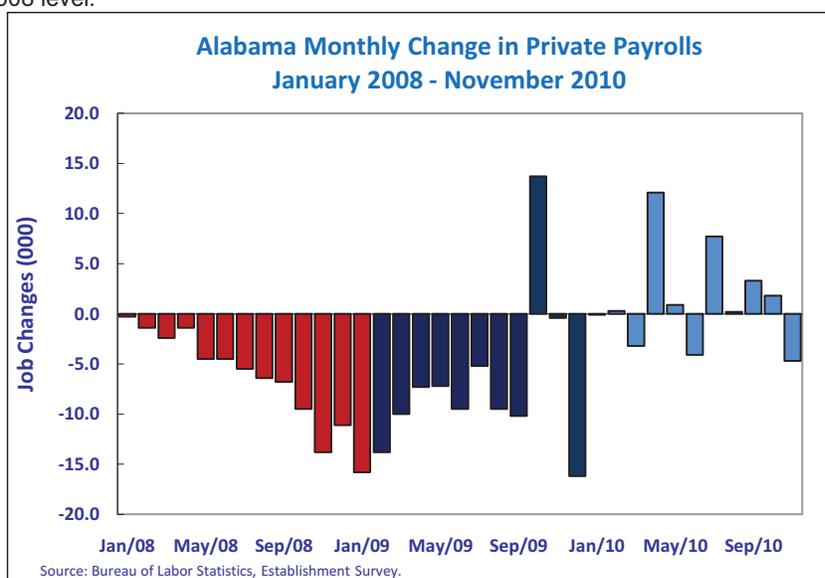

- Across the country, the private sector gained jobs in each month of 2010.
- The President's Council of Economic Advisers estimates that investments made through the Recovery Act have boosted employment in Alabama by 44,000 jobs through the 3rd quarter of 2010.
- In Alabama, private sector employment fell by 9.7 percent from December 2007 to December 2009. In 2010, private sector employment grew by 1.0 percent.
- In Alabama, employees in the construction, professional and business services, and information services sectors faced the largest job losses (as a percent of employment within an industry) over the recession. In 2010, the following sectors in Alabama experienced the greatest employment increases: leisure and hospitality; other services; and trade, transportation and utilities.\*
- As the economy recovers from the Great Recession, service-providing industries are projected to add the most jobs between 2008 and 2018, with the largest gains in professional and business services, education, health care and social assistance, and State and local government. Within the goods-producing sector of the economy, only the construction industry is projected to add jobs above its 2008 level.

### EMPLOYMENT

- The unemployment rate in Alabama was 9.0 percent in November 2010, up 5.1 percentage points from December 2007, but down from its most recent peak of 11.1 percent reached in February 2010.
- 193,000 Alabama residents were counted among the unemployed in Alabama during November 2010.

### EARNINGS

- Between the start of the recession in the 4th quarter of 2007 and the 3rd quarter of 2009, inflation-adjusted total personal income in the United States declined 2.2 percent. Most recently, in the 3rd quarter of 2010, total personal income remained 0.6 percent below the 2nd quarter 2008 peak.

- Real per capita personal income (in 2005 \$) in Alabama was \$30,891.70 in the 3rd quarter of 2010, up from \$30,737.40 in the 3rd quarter of 2008.

### HOUSING

- National home prices, including distressed sales, saw a decrease of 3.9 percent in October 2010 from October 2009 compared to a 2.4 percent decrease in September. In Alabama, home prices saw a decrease of 9.3 percent in October 2010 from October 2009 following September's year over year decrease of 8.3 percent.
- The median price of single-family homes in Alabama was \$128,969 in the second quarter of 2010, compared to \$180,176 nationwide.
- As of the 3rd quarter of 2010, 2.0 percent of all mortgages, including 6.9 percent of subprime mortgages, were in foreclosure in Alabama.
- Housing starts in Alabama totaled 10,640 units (seasonally adjusted annual rate) in October 2010, an increase of 8.0 percent from September.
- Within the South census region, which includes Alabama, sales of new single-family homes totaled 164,000 units in October 2010, an increase of 3.1 percent from September. Sales of existing single-family homes decreased 2.5 percent to 1,530,000 units (at seasonally adjusted annual rates) from September to October 2010.

## How Does Alabama Compare To Other States?

Workers across the country have been hard hit by the Great Recession. This chart allows you to compare Alabama to other states using two metrics.

The current unemployment rate (measured along the horizontal axis) serves as a gauge of current labor market conditions faced by residents, while the proportion of jobs lost within Alabama over the course of the recession (shown along the vertical axis) measures the toll the recession has taken on the job supply in Alabama.

States falling in the upper right quadrant have lost a disproportionate share of jobs, relative to the total United States, and have unemployment rates higher than the national unemployment rate. States falling in the lower left quadrant have unemployment rates lower than the national average and smaller job losses over the recession.

## How Does California Compare To Other States?

Workers across the country have been hard hit by the Great Recession. This chart allows you to compare California to other states using two metrics.

The current unemployment rate (measured along the horizontal axis) serves as a gauge of current labor market conditions faced by residents, while the proportion of jobs lost within California over the course of the recession (shown along the vertical axis) measures the toll the recession has taken on the job supply in California.

States falling in the upper right quadrant have lost a disproportionate share of jobs, relative to the total United States, and have unemployment rates higher than the national unemployment rate. States falling in the lower left quadrant have unemployment rates lower than the national average and smaller job losses over the recession.

## Economic Overview And Outlook: Colorado

### JOBS

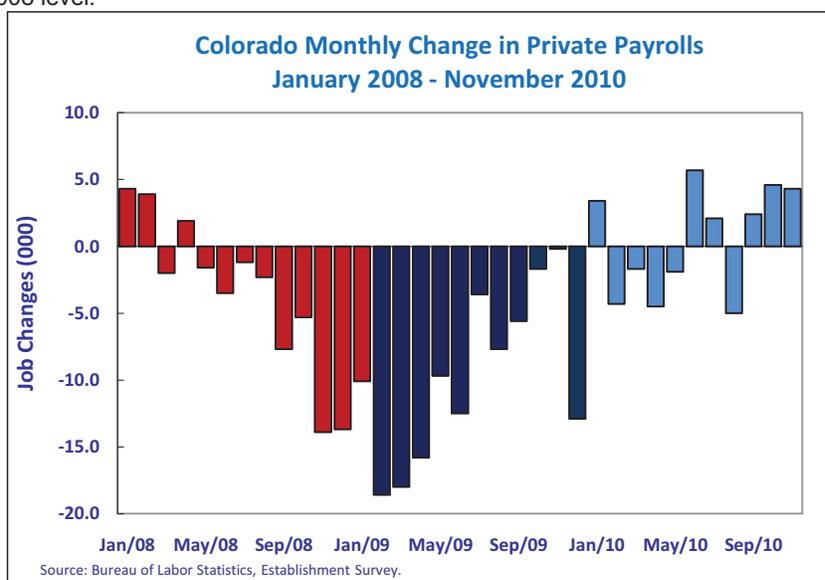

- ❑ Across the country, the private sector gained jobs in each month of 2010.
- ❑ The President's Council of Economic Advisers estimates that investments made through the Recovery Act have boosted employment in Colorado by 52,000 jobs through the 3rd quarter of 2010.
- ❑ In Colorado, private sector employment fell by 8.0 percent from December 2007 to December 2009. In 2010, private sector employment grew by 0.3 percent.
- ❑ In Colorado, employees in the construction, manufacturing, and mining sectors faced the largest job losses (as a percent of employment within an industry) over the recession. In 2010, the following sectors in Colorado experienced the greatest employment increases: education and health services; leisure and hospitality; and professional and business services.\*
- ❑ As the economy recovers from the Great Recession, service-providing industries are projected to add the most jobs between 2008 and 2018, with the largest gains in professional and business services, education, health care and social assistance, and State and local government. Within the goods-producing sector of the economy, only the construction industry is projected to add jobs above its 2008 level.

### EMPLOYMENT

- ❑ The unemployment rate in Colorado was 8.6 percent in November 2010, up 4.3 percentage points from December 2007, surpassing its most recent peak of 8.4 percent reached in October 2010.
- ❑ 230,000 Colorado residents were counted among the unemployed in Colorado during November 2010.

### EARNINGS

- ❑ Between the start of the recession in the 4th quarter of 2007 and the 3rd quarter of 2009, inflation-adjusted total personal income in the United States declined 2.2 percent. Most recently, in the 3rd quarter of 2010, total personal income remained 0.6 percent below the 2nd quarter 2008 peak.
- ❑ Real per capita personal income (in 2005 \$) in Colorado was \$37,881.20 in the 3rd quarter of 2010, down from \$39,642.00 in the 3rd quarter of 2008.

### HOUSING

- ❑ National home prices, including distressed sales, saw a decrease of 3.9 percent in October 2010 from October 2009 compared to a 2.4 percent decrease in September. In Colorado, home prices saw a decrease of 2.9 percent in October 2010 from October 2009 following September's year over year decrease of 2.3 percent.
- ❑ The median price of single-family homes in Colorado was \$217,558 in the second quarter of 2010, compared to \$180,176 nationwide.
- ❑ As of the 3rd quarter of 2010, 2.4 percent of all mortgages, including 8.5 percent of subprime mortgages, were in foreclosure in Colorado.
- ❑ Housing starts in Colorado totaled 7,900 units (seasonally adjusted annual rate) in October 2010, a decrease of 55.4 percent from September.
- ❑ Within the West census region, which includes Colorado, sales of new single-family homes totaled 51,000 units in October 2010, a decrease of 23.9 percent from September. Sales of existing single-family homes decreased 2.1 percent to 940,000 units (at seasonally adjusted annual rates) from September to October 2010.

## How Does Georgia Compare To Other States?

Workers across the country have been hard hit by the Great Recession. This chart allows you to compare Georgia to other states using two metrics.

The current unemployment rate (measured along the horizontal axis) serves as a gauge of current labor market conditions faced by residents, while the proportion of jobs lost within Georgia over the course of the recession (shown along the vertical axis) measures the toll the recession has taken on the job supply in Georgia.

States falling in the upper right quadrant have lost a disproportionate share of jobs, relative to the total United States, and have unemployment rates higher than the national unemployment rate. States falling in the lower left quadrant have unemployment rates lower than the national average and smaller job losses over the recession.

## Economic Overview And Outlook: Hawaii

### JOBS

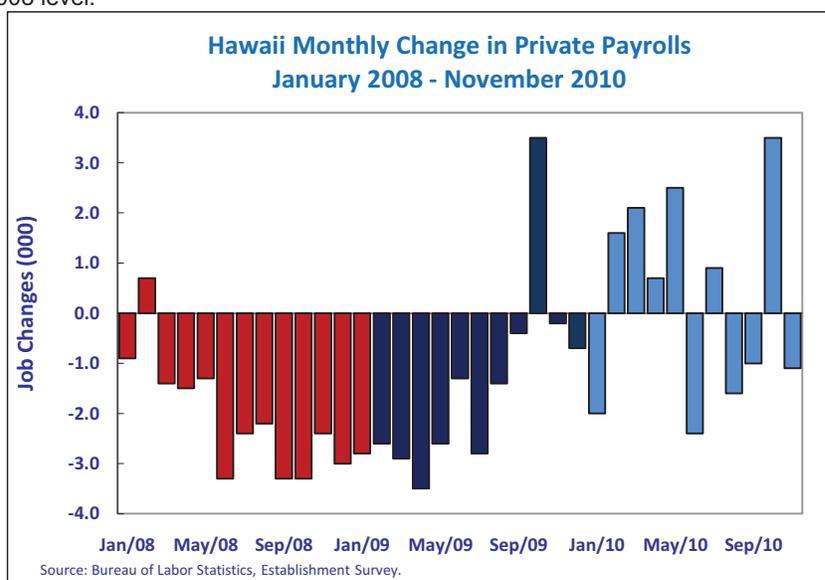

- Across the country, the private sector gained jobs in each month of 2010.
- The President's Council of Economic Advisers estimates that investments made through the Recovery Act have boosted employment in Hawaii by 13,000 jobs through the 3rd quarter of 2010.
- In Hawaii, private sector employment fell by 8.3 percent from December 2007 to December 2009. In 2010, private sector employment grew by 0.7 percent.
- In Hawaii, employees in the construction, trade, transportation and utilities, and leisure and hospitality sectors faced the largest job losses (as a percent of employment within an industry) over the recession. In 2010, the following sectors in Hawaii experienced the greatest employment increases: leisure and hospitality; government; and construction.\*
- As the economy recovers from the Great Recession, service-providing industries are projected to add the most jobs between 2008 and 2018, with the largest gains in professional and business services, education, health care and social assistance, and State and local government. Within the goods-producing sector of the economy, only the construction industry is projected to add jobs above its 2008 level.

### EMPLOYMENT

- The unemployment rate in Hawaii was 6.4 percent in November 2010, up 3.4 percentage points from December 2007, but down from its most recent peak of 7.0 percent reached in September 2009.
- 41,000 Hawaii residents were counted among the unemployed in Hawaii during November 2010.

### EARNINGS

- Between the start of the recession in the 4th quarter of 2007 and the 3rd quarter of 2009, inflation-adjusted total personal income in the United States declined 2.2 percent. Most recently, in the 3rd quarter of 2010, total personal income remained 0.6 percent below the 2nd quarter 2008 peak.

- Real per capita personal income (in 2005 \$) in Hawaii was \$38,436.10 in the 3rd quarter of 2010, down from \$38,488.90 in the 3rd quarter of 2008.

### HOUSING

- National home prices, including distressed sales, saw a decrease of 3.9 percent in October 2010 from October 2009 compared to a 2.4 percent decrease in September. In Hawaii, home prices saw an increase of 0.4 percent in October 2010 from October 2009 following September's year over year decrease of 1.1 percent.
- The median price of single-family homes in Hawaii was \$499,837 in the second quarter of 2010, compared to \$180,176 nationwide.
- As of the 3rd quarter of 2010, 4.5 percent of all mortgages, including 17.3 percent of subprime mortgages, were in foreclosure in Hawaii.
- Housing starts in Hawaii totaled 1,800 units (seasonally adjusted annual rate) in October 2010, a decrease of 51.9 percent from September.
- Within the West census region, which includes Hawaii, sales of new single-family homes totaled 51,000 units in October 2010, a decrease of 23.9 percent from September. Sales of existing single-family homes decreased 2.1 percent to 940,000 units (at seasonally adjusted annual rates) from September to October 2010.

## How Does Kansas Compare To Other States?

Workers across the country have been hard hit by the Great Recession. This chart allows you to compare Kansas to other states using two metrics.

The current unemployment rate (measured along the horizontal axis) serves as a gauge of current labor market conditions faced by residents, while the proportion of jobs lost within Kansas over the course of the recession (shown along the vertical axis) measures the toll the recession has taken on the job supply in Kansas.

States falling in the upper right quadrant have lost a disproportionate share of jobs, relative to the total United States, and have unemployment rates higher than the national unemployment rate. States falling in the lower left quadrant have unemployment rates lower than the national average and smaller job losses over the recession.

## Economic Overview And Outlook: Kentucky

### JOBS

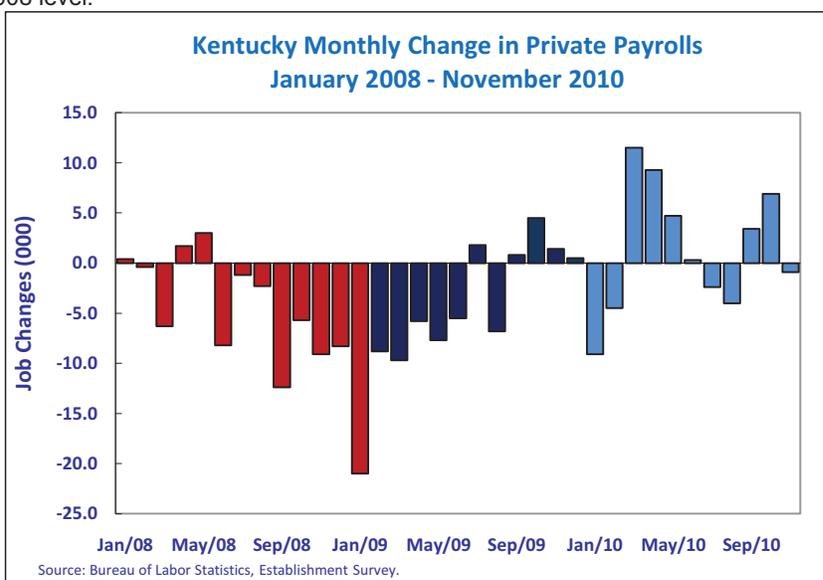

- Across the country, the private sector gained jobs in each month of 2010.
- The President's Council of Economic Advisers estimates that investments made through the Recovery Act have boosted employment in Kentucky by 42,000 jobs through the 3rd quarter of 2010.
- In Kentucky, private sector employment fell by 6.8 percent from December 2007 to December 2009. In 2010, private sector employment grew by 1.1 percent.
- In Kentucky, employees in the manufacturing, construction, and information services sectors faced the largest job losses (as a percent of employment within an industry) over the recession. In 2010, the following sectors in Kentucky experienced the greatest employment increases: manufacturing; mining; and trade, transportation and utilities.\*
- As the economy recovers from the Great Recession, service-providing industries are projected to add the most jobs between 2008 and 2018, with the largest gains in professional and business services, education, health care and social assistance, and State and local government. Within the goods-producing sector of the economy, only the construction industry is projected to add jobs above its 2008 level.

### EMPLOYMENT

- The unemployment rate in Kentucky was 10.2 percent in November 2010, up 4.7 percentage points from December 2007, but down from its most recent peak of 10.9 percent reached in February 2010.
- 213,000 Kentucky residents were counted among the unemployed in Kentucky during November 2010.

### EARNINGS

- Between the start of the recession in the 4th quarter of 2007 and the 3rd quarter of 2009, inflation-adjusted total personal income in the United States declined 2.2 percent. Most recently, in the 3rd quarter of 2010, total personal income remained 0.6 percent below the 2nd quarter 2008 peak.

- Real per capita personal income (in 2005 \$) in Kentucky was \$30,085.40 in the 3rd quarter of 2010, up from \$29,363.50 in the 3rd quarter of 2008.

### HOUSING

- National home prices, including distressed sales, saw a decrease of 3.9 percent in October 2010 from October 2009 compared to a 2.4 percent decrease in September. In Kentucky, home prices saw a decrease of 3.8 percent in October 2010 from October 2009 following September's year over year decrease of 3.7 percent.
- The median price of single-family homes in Kentucky was \$130,344 in the second quarter of 2010, compared to \$180,176 nationwide.
- As of the 3rd quarter of 2010, 3.2 percent of all mortgages, including 11.0 percent of subprime mortgages, were in foreclosure in Kentucky.
- Housing starts in Kentucky totaled 9,690 units (seasonally adjusted annual rate) in October 2010, an increase of 34.4 percent from September.
- Within the South census region, which includes Kentucky, sales of new single-family homes totaled 164,000 units in October 2010, an increase of 3.1 percent from September. Sales of existing single-family homes decreased 2.5 percent to 1,530,000 units (at seasonally adjusted annual rates) from September to October 2010.

## How Does Michigan Compare To Other States?

Workers across the country have been hard hit by the Great Recession. This chart allows you to compare Michigan to other states using two metrics.

The current unemployment rate (measured along the horizontal axis) serves as a gauge of current labor market conditions faced by residents, while the proportion of jobs lost within Michigan over the course of the recession (shown along the vertical axis) measures the toll the recession has taken on the job supply in Michigan.

States falling in the upper right quadrant have lost a disproportionate share of jobs, relative to the total United States, and have unemployment rates higher than the national unemployment rate. States falling in the lower left quadrant have unemployment rates lower than the national average and smaller job losses over the recession.

## Economic Overview And Outlook: Minnesota

### JOBS

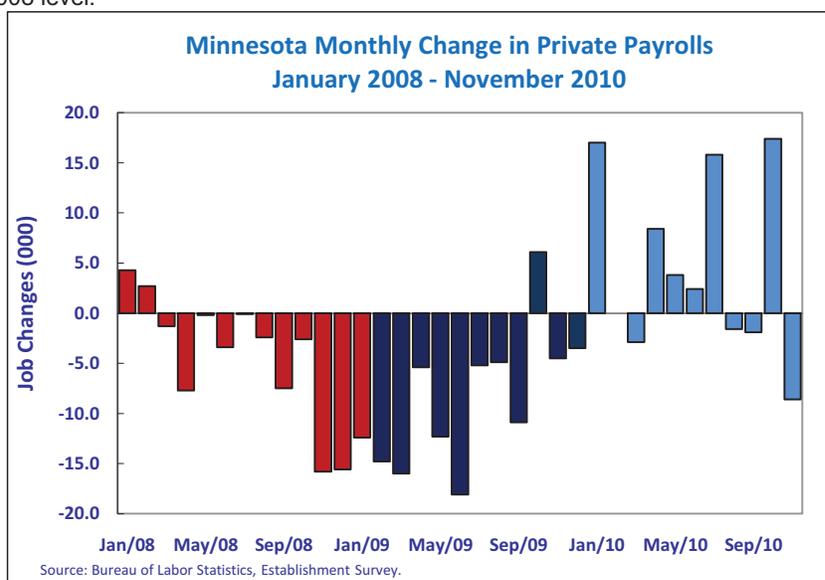

- Across the country, the private sector gained jobs in each month of 2010.
- The President's Council of Economic Advisers estimates that investments made through the Recovery Act have boosted employment in Minnesota by 63,000 jobs through the 3rd quarter of 2010.
- In Minnesota, private sector employment fell by 6.4 percent from December 2007 to December 2009. In 2010, private sector employment grew by 2.3 percent.
- In Minnesota, employees in the mining, construction, and manufacturing sectors faced the largest job losses (as a percent of employment within an industry) over the recession. In 2010, the following sectors in Minnesota experienced the greatest employment increases: mining; information services; and leisure and hospitality.\*
- As the economy recovers from the Great Recession, service-providing industries are projected to add the most jobs between 2008 and 2018, with the largest gains in professional and business services, education, health care and social assistance, and State and local government. Within the goods-producing sector of the economy, only the construction industry is projected to add jobs above its 2008 level.

### EMPLOYMENT

- The unemployment rate in Minnesota was 7.1 percent in November 2010, up 2.4 percentage points from December 2007, but down from its most recent peak of 8.4 percent reached in June 2009.
- 208,000 Minnesota residents were counted among the unemployed in Minnesota during November 2010.

### EARNINGS

- Between the start of the recession in the 4th quarter of 2007 and the 3rd quarter of 2009, inflation-adjusted total personal income in the United States declined 2.2 percent. Most recently, in the 3rd quarter of 2010, total personal income remained 0.6 percent below the 2nd quarter 2008 peak.
- Real per capita personal income (in 2005 \$) in Minnesota was \$38,817.00 in the 3rd quarter of 2010, down from \$39,450.60 in the 3rd quarter of 2008.

### HOUSING

- National home prices, including distressed sales, saw a decrease of 3.9 percent in October 2010 from October 2009 compared to a 2.4 percent decrease in September. In Minnesota, home prices saw a decrease of 3.2 percent in October 2010 from October 2009 following September's year over year decrease of 2.1 percent.
- The median price of single-family homes in Minnesota was \$164,105 in the second quarter of 2010, compared to \$180,176 nationwide.
- As of the 3rd quarter of 2010, 2.9 percent of all mortgages, including 12.5 percent of subprime mortgages, were in foreclosure in Minnesota.
- Housing starts in Minnesota totaled 12,190 units (seasonally adjusted annual rate) in October 2010, an increase of 58.7 percent from September.
- Within the Midwest census region, which includes Minnesota, sales of new single-family homes totaled 39,000 units in October 2010, a decrease of 20.4 percent from September. Sales of existing single-family homes decreased 1.1 percent to 860,000 units (at seasonally adjusted annual rates) from September to October 2010.

## How Does Nevada Compare To Other States?

Workers across the country have been hard hit by the Great Recession. This chart allows you to compare Nevada to other states using two metrics.

The current unemployment rate (measured along the horizontal axis) serves as a gauge of current labor market conditions faced by residents, while the proportion of jobs lost within Nevada over the course of the recession (shown along the vertical axis) measures the toll the recession has taken on the job supply in Nevada.

States falling in the upper right quadrant have lost a disproportionate share of jobs, relative to the total United States, and have unemployment rates higher than the national unemployment rate. States falling in the lower left quadrant have unemployment rates lower than the national average and smaller job losses over the recession.

## How Does North Dakota Compare To Other States?

Workers across the country have been hard hit by the Great Recession. This chart allows you to compare North Dakota to other states using two metrics.

The current unemployment rate (measured along the horizontal axis) serves as a gauge of current labor market conditions faced by residents, while the proportion of jobs lost within North Dakota over the course of the recession (shown along the vertical axis) measures the toll the recession has taken on the job supply in North Dakota.

States falling in the upper right quadrant have lost a disproportionate share of jobs, relative to the total United States, and have unemployment rates higher than the national unemployment rate. States falling in the lower left quadrant have unemployment rates lower than the national average and smaller job losses over the recession.

## How Does South Carolina Compare To Other States?

Workers across the country have been hard hit by the Great Recession. This chart allows you to compare South Carolina to other states using two metrics.

The current unemployment rate (measured along the horizontal axis) serves as a gauge of current labor market conditions faced by residents, while the proportion of jobs lost within South Carolina over the course of the recession (shown along the vertical axis) measures the toll the recession has taken on the job supply in South Carolina.

States falling in the upper right quadrant have lost a disproportionate share of jobs, relative to the total United States, and have unemployment rates higher than the national unemployment rate. States falling in the lower left quadrant have unemployment rates lower than the national average and smaller job losses over the recession.

## Economic Overview And Outlook: Virginia

### JOBS

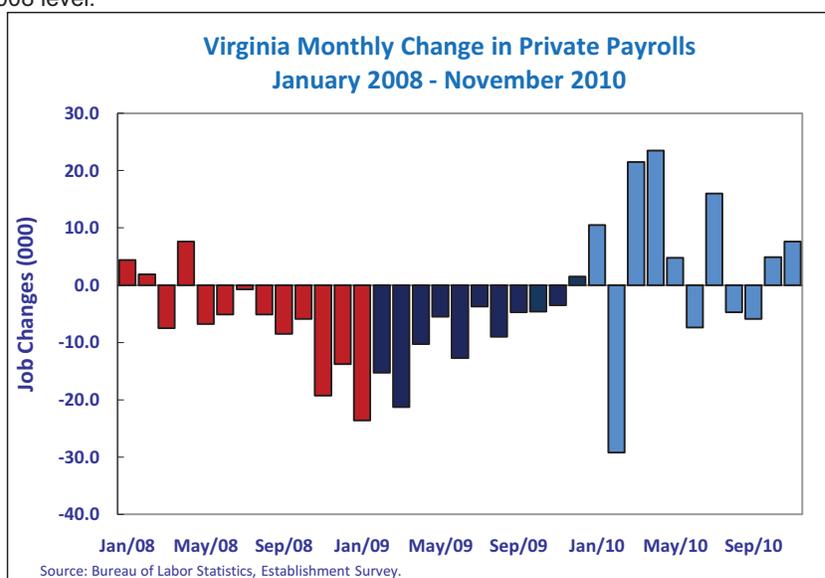

- Across the country, the private sector gained jobs in each month of 2010.
- The President's Council of Economic Advisers estimates that investments made through the Recovery Act have boosted employment in Virginia by 76,000 jobs through the 3rd quarter of 2010.
- In Virginia, private sector employment fell by 5.6 percent from December 2007 to December 2009. In 2010, private sector employment grew by 1.4 percent.
- In Virginia, employees in the construction, manufacturing, and information services sectors faced the largest job losses (as a percent of employment within an industry) over the recession. In 2010, the following sectors in Virginia experienced the greatest employment increases: professional and business services; leisure and hospitality; and education and health services.\*
- As the economy recovers from the Great Recession, service-providing industries are projected to add the most jobs between 2008 and 2018, with the largest gains in professional and business services, education, health care and social assistance, and State and local government. Within the goods-producing sector of the economy, only the construction industry is projected to add jobs above its 2008 level.

### EMPLOYMENT

- The unemployment rate in Virginia was 6.8 percent in November 2010, up 3.6 percentage points from December 2007, but down from its most recent peak of 7.3 percent reached in March 2010.
- 282,000 Virginia residents were counted among the unemployed in Virginia during November 2010.

### EARNINGS

- Between the start of the recession in the 4th quarter of 2007 and the 3rd quarter of 2009, inflation-adjusted total personal income in the United States declined 2.2 percent. Most recently, in the 3rd quarter of 2010, total personal income remained 0.6 percent below the 2nd quarter 2008 peak.

- Real per capita personal income (in 2005 \$) in Virginia was \$40,579.80 in the 3rd quarter of 2010, down from \$40,671.60 in the 3rd quarter of 2008.

### HOUSING

- National home prices, including distressed sales, saw a decrease of 3.9 percent in October 2010 from October 2009 compared to a 2.4 percent decrease in September. In Virginia, home prices saw a decrease of 0.6 percent in October 2010 from October 2009 following September's year over year increase of 0.8 percent.
- The median price of single-family homes in Virginia was \$229,420 in the second quarter of 2010, compared to \$180,176 nationwide.
- As of the 3rd quarter of 2010, 1.8 percent of all mortgages, including 7.6 percent of subprime mortgages, were in foreclosure in Virginia.
- Housing starts in Virginia totaled 18,430 units (seasonally adjusted annual rate) in October 2010, a decrease of 30.4 percent from September.
- Within the South census region, which includes Virginia, sales of new single-family homes totaled 164,000 units in October 2010, an increase of 3.1 percent from September. Sales of existing single-family homes decreased 2.5 percent to 1,530,000 units (at seasonally adjusted annual rates) from September to October 2010.

## How Does Virginia Compare To Other States?

Workers across the country have been hard hit by the Great Recession. This chart allows you to compare Virginia to other states using two metrics.

The current unemployment rate (measured along the horizontal axis) serves as a gauge of current labor market conditions faced by residents, while the proportion of jobs lost within Virginia over the course of the recession (shown along the vertical axis) measures the toll the recession has taken on the job supply in Virginia.

States falling in the upper right quadrant have lost a disproportionate share of jobs, relative to the total United States, and have unemployment rates higher than the national unemployment rate. States falling in the lower left quadrant have unemployment rates lower than the national average and smaller job losses over the recession.

### EXPLANATION OF NET JOB LOSS AND UNEMPLOYMENT RATE CHART

The chart on the following page shows a comparison of the current (November 2010) unemployment rate and cumulative nonfarm job losses (as a percent of total employment) in each state and the District of Columbia versus the national average. States that appear in the upper right quadrant are experiencing unemployment rates higher than the national average and cumulative job losses greater than the national average. Most of these states were dependent on manufacturing and construction. While the unemployment rate in most states has declined in 2010, Nevada's unemployment rate continues to climb which has moved Nevada further away from the clustering of states around the U.S. average data point.

States in the lower left quadrant are experiencing lower unemployment rates and smaller job losses than the national average.

States in the upper left quadrant experienced net job losses greater than the national average but have a current unemployment rate lower than the national average. Those states all started the recession with unemployment rates less than the national average.

Negative job losses correspond to job creation during the recession, as seen in North Dakota, and the District of Columbia. North Dakota expanded employment in the natural resource and mining sector and education and health services sector during the recession. In addition, North Dakota and the District of Columbia saw gains in government jobs during the recession. These job gains outweighed losses in the other sectors. Despite job gains, the unemployment rate in the District of Columbia is currently higher than the national average. The higher unemployment rate in District of Columbia is partly due to a higher unemployment rate before the recession began – the unemployment rate was 5.7 percent in November 2007, above the national average of 4.7 percent. It is likely, given the small size of the District of Columbia, that jobs created in the District of Columbia are filled by Virginia and Maryland residents.
