Executive Summary

This is the eighth edition of state-by-state snapshots issued by the Joint Economic Committee during the 112th Congress and includes data through July 2011.

This month's report shows that more than four out of five states added private-sector jobs in July. Nationally, the pace of private-sector job gains increased in July to 154,000, from gains of 80,000 and 99,000 in June and May, respectively. Retail sales, a key indicator of consumer health, increased by 0.5 percent in July, the strongest growth achieved since March of this year. Manufacturing data from July, on the other hand, suggest that the pace of recovery may be decelerating, with the ISM Manufacturing Index dropping to 50.9 percent in July. While July marked the 24th consecutive month of expansion in the manufacturing sector, July's ISM reading was the lowest since July 2009.

Against this national backdrop, this report highlights progress at the state level in creating private-sector jobs and reducing unemployment and tracks the employment gains in key sectors, including manufacturing and professional and business services.

Report highlights include:

- Forty-one states and the District of Columbia added private-sector jobs in July. Texas's private sector saw the largest expansion during the month, adding 38,700 jobs, followed by New York (14,100) and Pennsylvania (12,500). In the past 12 months, 10 states (Texas, California, New York, Ohio, Pennsylvania, Michigan, Massachusetts, Illinois, Washington and Florida) have each added 45,000 or more private-sector jobs. Only Delaware and Indiana lost private-sector positions in the past year. From July 2010 - July 2011, North Dakota (6.5 percent), Oklahoma (3.4 percent) and Texas (3.4 percent) had the largest percentage gains in private-sector employment.
- Despite private-sector job growth in a majority of the states, 28 states and the District of Columbia saw their unemployment rates increase in July, with ten of those states and DC recording statistically significant increases. Illinois, Michigan, Minnesota, South Carolina and the District of Columbia saw the largest increases in the unemployment rate (each increasing by 0.4 percentage point.) New Hampshire, California, Maryland, Ohio, Pennsylvania and Texas also recorded statistically significant increases while the remaining 40 states did not have changes in the unemployment rate that were statistically significant. In the past 12 months, Nevada (-2.0 percentage points), New Mexico (-1.8 percentage points) and Indiana (-1.6 percentage points) had the largest decreases in the unemployment rate. Eight other states (Michigan, Oklahoma, Oregon, Wyoming, Ohio, Florida, Virginia and North Dakota) had statistically significant

unemployment rate declines in the past 12 months. The remaining 39 states and DC did not have statistically significant changes in the unemployment rate in the past year. Nevada (12.9 percent) and California (12.0 percent) had the highest unemployment rates in July. The national unemployment rate during the month was 9.1 percent.

- Manufacturing employment expanded in 32 states in July. The largest gains were in Ohio which added 7,900 manufacturing jobs, followed by Michigan (4,900) and Tennessee (4,000). Overall, the United States has added 165,000 manufacturing jobs in the past twelve months. Seven states – Texas (20,000), Michigan (15,200), California (15,000), Wisconsin (15,000), Missouri (12,600), Ohio (11,900) and Illinois (11,300) – have each added more than 10,000 manufacturing positions during the past year.
- Thirty states and the District of Columbia added jobs in the professional and business services sector in July. New York (7,200), Ohio (6,000) and Kentucky (4,800) posted the largest increases. In the past year, 42 states and the District of Columbia have added professional and business services jobs, with California, Texas and New York recording the largest gains.
- A slim majority of states (26) added jobs in the leisure and hospitality sector during July. Texas (7,500), Colorado (3,100) and Pennsylvania (2,900) saw the largest gains. In the past 12 months, 43 states have added leisure and hospitality jobs. During this period, 212,000 leisure and hospitality jobs have been added.

###

Economic Overview And Outlook: Alabama

JOBS

- Including July, the private sector has gained jobs nationwide for 17 consecutive months.
- In Alabama, private sector employment fell by 9.4 percent from January 2008 to February 2010. Since February 2010, private sector employment has grown by 1.3 percent.
- In Alabama, employees in the construction, professional and business services, and information services sectors faced the largest job losses (as a percent of employment within an industry) over the recession. Since the beginning of 2010, the following sectors in Alabama have experienced the greatest employment increases: professional and business services; trade, transportation and utilities; and leisure and hospitality.*
- As the economy recovers from the Great Recession, service-providing industries are projected to add the most jobs between 2008 and 2018, with the largest gains in professional and business services, education, health care and social assistance, and State and local government. Within the goods-producing sector of the economy, only the construction industry is projected to add jobs above its 2008 level.

EMPLOYMENT

- The unemployment rate in Alabama was 10.0 percent in July 2011, up 6.2 percentage points from December 2007, but down from its most recent peak of 10.4 percent in December 2009.
- 216,000 Alabama residents were counted among the unemployed in Alabama during July 2011.

EARNINGS

- Between the start of the recession in the 4th quarter of 2007 and the 3rd quarter of 2009, inflation-adjusted total personal income in the United States declined 2.2 percent. Most recently, in the 1st quarter of 2011, total personal income is 1.1 percent above its 4th quarter of 2007 level.

- Real per capita personal income (in 2005 \$) in Alabama was \$30,794.80 in the 1st quarter of 2011, up from \$30,415.50 in the 1st quarter of 2009.

HOUSING

- National home prices, including distressed sales, saw a decrease of 6.8 percent in June 2011 from June 2010 compared to a 6.7 percent decrease in May. In Alabama, home prices saw a decrease of 6.6 percent in June 2011 from June 2010 following May's year over year decrease of 8.8 percent.
- The median price of single-family homes in Alabama was \$128,969 in the second quarter of 2010, compared to \$180,176 nationwide.
- As of the 1st quarter of 2011, 2.2 percent of all mortgages, including 7.4 percent of subprime mortgages, were in foreclosure in Alabama.
- Housing starts in Alabama totaled 9,120 units (seasonally adjusted annual rate) in June 2011, an increase of 22.4 percent from May.
- Within the South census region, which includes Alabama, sales of new single-family homes totaled 181,000 units in June 2011, an increase of 3.4 percent from May. Sales of existing single-family homes decreased 2.9 percent to 1,650,000 units (at seasonally adjusted annual rates) from June to July 2011.

How Does Alabama Compare To Other States?

Workers across the country were hard hit during the Great Recession. Although labor markets in many states have started recovering, employment in most states still remains below pre-recession levels. The chart below allows you to compare Alabama to other states using two metrics.

The current unemployment rate (measured along the horizontal axis) serves as a gauge of current labor market conditions faced by residents, while the proportion of jobs lost within Alabama since the start of the recession (shown along the vertical axis) measures the toll the recession took on the job supply in Alabama.

States falling in the upper right quadrant have lost a disproportionate share of jobs, relative to the total United States, and have unemployment rates higher than the national unemployment rate. States falling in the lower left quadrant have unemployment rates job losses (or even gains) lower than the national average.

STATE QUICK FACTS

		Alabama	United States
Unemployment Rates	July 2008	4.9%	5.8%
	July 2009	10.2%	9.5%
	July 2010	9.2%	9.5%

JOBS

- Including July, the private sector has gained jobs nationwide for 17 consecutive months.
- In Colorado, private sector employment fell by 7.8 percent from January 2008 to February 2010. Since February 2010, private sector employment has grown by 1.6 percent.
- In Colorado, employees in the construction, manufacturing, and mining sectors faced the largest job losses (as a percent of employment within an industry) over the recession. Since the beginning of 2010, the following sectors in Colorado have experienced the greatest employment increases: mining; leisure and hospitality; and education and health services.*
- As the economy recovers from the Great Recession, service-providing industries are projected to add the most jobs between 2008 and 2018, with the largest gains in professional and business services, education, health care and social assistance, and State and local government. Within the goods-producing sector of the economy, only the construction industry is projected to add jobs above its 2008 level.

EMPLOYMENT

- The unemployment rate in Colorado was 8.5 percent in July 2011, up 4.5 percentage points from December 2007, but down from its most recent peak of 9.3 percent in February 2011.
- 227,000 Colorado residents were counted among the unemployed in Colorado during July 2011.

EARNINGS

- Between the start of the recession in the 4th quarter of 2007 and the 3rd quarter of 2009, inflation-adjusted total personal income in the United States declined 2.2 percent. Most recently, in the 1st quarter of 2011, total personal income is 1.1 percent above its 4th quarter of 2007 level.

- Real per capita personal income (in 2005 \$) in Colorado was \$39,176.90 in the 1st quarter of 2011, down from \$39,552.10 in the 1st quarter of 2009.

HOUSING

- National home prices, including distressed sales, saw a decrease of 6.8 percent in June 2011 from June 2010 compared to a 6.7 percent decrease in May. In Colorado, home prices saw a decrease of 3.1 percent in June 2011 from June 2010 following May's year over year decrease of 4.7 percent.
- The median price of single-family homes in Colorado was \$217,558 in the second quarter of 2010, compared to \$180,176 nationwide.
- As of the 1st quarter of 2011, 2.3 percent of all mortgages, including 8.3 percent of subprime mortgages, were in foreclosure in Colorado.
- Housing starts in Colorado totaled 11,070 units (seasonally adjusted annual rate) in June 2011, an increase of 2.4 percent from May.
- Within the West census region, which includes Colorado, sales of new single-family homes totaled 69,000 units in June 2011, a decrease of 12.7 percent from May. Sales of existing single-family homes decreased 12.8 percent to 950,000 units (at seasonally adjusted annual rates) from June to July 2011.

How Does Colorado Compare To Other States?

Workers across the country were hard hit during the Great Recession. Although labor markets in many states have started recovering, employment in most states still remains below pre-recession levels. The chart below allows you to compare Colorado to other states using two metrics.

The current unemployment rate (measured along the horizontal axis) serves as a gauge of current labor market conditions faced by residents, while the proportion of jobs lost within Colorado since the start of the recession (shown along the vertical axis) measures the toll the recession took on the job supply in Colorado.

States falling in the upper right quadrant have lost a disproportionate share of jobs, relative to the total United States, and have unemployment rates higher than the national unemployment rate. States falling in the lower left quadrant have unemployment rates job losses (or even gains) lower than the national average.

STATE QUICK FACTS

- Including July, the private sector has gained jobs nationwide for 17 consecutive months.
- In Hawaii, private sector employment fell by 8.3 percent from January 2008 to February 2010. Since February 2010, private sector employment has grown by 1.9 percent.
- In Hawaii, employees in the construction, trade, transportation and utilities, and leisure and hospitality sectors faced the largest job losses (as a percent of employment within an industry) over the recession. Since the beginning of 2010, the following sectors in Hawaii have experienced the greatest employment increases: education and health services; professional and business services; and government.*
- As the economy recovers from the Great Recession, service-providing industries are projected to add the most jobs between 2008 and 2018, with the largest gains in professional and business services, education, health care and social assistance, and State and local government. Within the goods-producing sector of the economy, only the construction industry is projected to add jobs above its 2008 level.

EMPLOYMENT

- The unemployment rate in Hawaii was 6.1 percent in July 2011, up 3.1 percentage points from December 2007, but down from its most recent peak of 7.0 percent in November 2009.
- 38,000 Hawaii residents were counted among the unemployed in Hawaii during July 2011.

EARNINGS

- Between the start of the recession in the 4th quarter of 2007 and the 3rd quarter of 2009, inflation-adjusted total personal income in the United States declined 2.2 percent. Most recently, in the 1st quarter of 2011, total personal income is 1.1 percent above its 4th quarter of 2007 level.

- Real per capita personal income (in 2005 \$) in Hawaii was \$37,299.40 in the 1st quarter of 2011, down from \$37,499.80 in the 1st quarter of 2009.

HOUSING

- National home prices, including distressed sales, saw a decrease of 6.8 percent in June 2011 from June 2010 compared to a 6.7 percent decrease in May. In Hawaii, home prices saw a decrease of 2.2 percent in June 2011 from June 2010 following May's year over year decrease of 2.2 percent.
- The median price of single-family homes in Hawaii was \$499,837 in the second quarter of 2010, compared to \$180,176 nationwide.
- As of the 1st quarter of 2011, 4.6 percent of all mortgages, including 18.0 percent of subprime mortgages, were in foreclosure in Hawaii.
- Housing starts in Hawaii totaled 3,990 units (seasonally adjusted annual rate) in June 2011, an increase of 101.5 percent from May.
- Within the West census region, which includes Hawaii, sales of new single-family homes totaled 69,000 units in June 2011, a decrease of 12.7 percent from May. Sales of existing single-family homes decreased 12.8 percent to 950,000 units (at seasonally adjusted annual rates) from June to July 2011.

How Does Hawaii Compare To Other States?

Workers across the country were hard hit during the Great Recession. Although labor markets in many states still remains below pre-recession levels. The chart below allows you to compare Hawaii to other states using two metrics.

The current unemployment rate (measured along the horizontal axis) serves as a gauge of current labor market conditions faced by residents, while the proportion of jobs lost within Hawaii since the start of the recession (shown along the vertical axis) measures the toll the recession took on the job supply in Hawaii.

States falling in the upper right quadrant have lost a disproportionate share of jobs, relative to the total United States, and have unemployment rates higher than the national unemployment rate. States falling in the lower left quadrant have unemployment rates job losses (or even gains) lower than the national average.

- In Kentucky, employees in the manufacturing, construction, and information services sectors faced the largest job losses (as a percent of employment within an industry) over the recession. Since the beginning of 2010, the following sectors in Kentucky have experienced the greatest employment increases: leisure and hospitality; professional and business services; and mining.*
- As the economy recovers from the Great Recession, service-providing industries are projected to add the most jobs between 2008 and 2018, with the largest gains in professional and business services, education, health care and social assistance, and State and local government. Within the goods-producing sector of the economy, only the construction industry is projected to add jobs above its 2008 level.

EMPLOYMENT

- The unemployment rate in Kentucky was 9.5 percent in July 2011, up 3.9 percentage points from December 2007, but down from its most recent peak of 11.1 percent in August 2009.
- 200,000 Kentucky residents were counted among the unemployed in Kentucky during July 2011.

EARNINGS

- Between the start of the recession in the 4th quarter of 2007 and the 3rd quarter of 2009, inflation-adjusted total personal income in the United States declined 2.2 percent. Most recently, in the 1st quarter of 2011, total personal income is 1.1 percent above its 4th quarter of 2007 level.
- Real per capita personal income (in 2005 \$) in Kentucky was \$30,276.70 in the 1st quarter of 2011, up from \$29,531.80 in the 1st quarter of 2009.

HOUSING

- National home prices, including distressed sales, saw a decrease of 6.8 percent in June 2011 from June 2010 compared to a 6.7 percent decrease in May. In Kentucky, home prices saw a decrease of 3.9 percent in June 2011 from June 2010 following May's year over year decrease of 5.3 percent.
- The median price of single-family homes in Kentucky was \$130,344 in the second quarter of 2010, compared to \$180,176 nationwide.
- As of the 1st quarter of 2011, 3.8 percent of all mortgages, including 12.3 percent of subprime mortgages, were in foreclosure in Kentucky.
- Housing starts in Kentucky totaled 6,860 units (seasonally adjusted annual rate) in June 2011, an increase of 41.4 percent from May.
- Within the South census region, which includes Kentucky, sales of new single-family homes totaled 181,000 units in June 2011, an increase of 3.4 percent from May. Sales of existing single-family homes decreased 2.9 percent to 1,650,000 units (at seasonally adjusted annual rates) from June to July 2011.

How Does Kentucky Compare To Other States?

Workers across the country were hard hit during the Great Recession. Although labor markets in many states have started recovering, employment in most states still remains below pre-recession levels. The chart below allows you to compare Kentucky to other states using two metrics.

The current unemployment rate (measured along the horizontal axis) serves as a gauge of current labor market conditions faced by residents, while the proportion of jobs lost within Kentucky since the start of the recession (shown along the vertical axis) measures the toll the recession took on the job supply in Kentucky.

States falling in the upper right quadrant have lost a disproportionate share of jobs, relative to the total United States, and have unemployment rates higher than the national unemployment rate. States falling in the lower left quadrant have unemployment rates job losses (or even gains) lower than the national average.

How Does Minnesota Compare To Other States?

Workers across the country were hard hit during the Great Recession. Although labor markets in many states have started recovering, employment in most states still remains below pre-recession levels. The chart below allows you to compare Minnesota to other states using two metrics.

The current unemployment rate (measured along the horizontal axis) serves as a gauge of current labor market conditions faced by residents, while the proportion of jobs lost within Minnesota since the start of the recession (shown along the vertical axis) measures the toll the recession took on the job supply in Minnesota.

States falling in the upper right quadrant have lost a disproportionate share of jobs, relative to the total United States, and have unemployment rates higher than the national unemployment rate. States falling in the lower left quadrant have unemployment rates job losses (or even gains) lower than the national average.

STATE QUICK FACTS

How Does New Hampshire Compare To Other States?

Workers across the country were hard hit during the Great Recession. Although labor markets in many states still remains below pre-recession levels. The chart below allows you to compare New Hampshire to other states using two metrics.

The current unemployment rate (measured along the horizontal axis) serves as a gauge of current labor market conditions faced by residents, while the proportion of jobs lost within New Hampshire since the start of the recession (shown along the vertical axis) measures the toll the recession took on the job supply in New Hampshire.

States falling in the upper right quadrant have lost a disproportionate share of jobs, relative to the total United States, and have unemployment rates higher than the national unemployment rate. States falling in the lower left quadrant have unemployment rates job losses (or even gains) lower than the national average.

How Does Ohio Compare To Other States?

Workers across the country were hard hit during the Great Recession. Although labor markets in many states have started recovering, employment in most states still remains below pre-recession levels. The chart below allows you to compare Ohio to other states using two metrics.

The current unemployment rate (measured along the horizontal axis) serves as a gauge of current labor market conditions faced by residents, while the proportion of jobs lost within Ohio since the start of the recession (shown along the vertical axis) measures the toll the recession took on the job supply in Ohio.

States falling in the upper right quadrant have lost a disproportionate share of jobs, relative to the total United States, and have unemployment rates higher than the national unemployment rate. States falling in the lower left quadrant have unemployment rates job losses (or even gains) lower than the national average.

How Does South Dakota Compare To Other States?

Workers across the country were hard hit during the Great Recession. Although labor markets in many states have started recovering, employment in most states still remains below pre-recession levels. The chart below allows you to compare South Dakota to other states using two metrics.

The current unemployment rate (measured along the horizontal axis) serves as a gauge of current labor market conditions faced by residents, while the proportion of jobs lost within South Dakota since the start of the recession (shown along the vertical axis) measures the toll the recession took on the job supply in South Dakota.

States falling in the upper right quadrant have lost a disproportionate share of jobs, relative to the total United States, and have unemployment rates higher than the national unemployment rate. States falling in the lower left quadrant have unemployment rates job losses (or even gains) lower than the national average.

How Does Washington Compare To Other States?

Workers across the country were hard hit during the Great Recession. Although labor markets in many states still remains below pre-recession levels. The chart below allows you to compare Washington to other states using two metrics.

The current unemployment rate (measured along the horizontal axis) serves as a gauge of current labor market conditions faced by residents, while the proportion of jobs lost within Washington since the start of the recession (shown along the vertical axis) measures the toll the recession took on the job supply in Washington.

States falling in the upper right quadrant have lost a disproportionate share of jobs, relative to the total United States, and have unemployment rates higher than the national unemployment rate. States falling in the lower left quadrant have unemployment rates job losses (or even gains) lower than the national average.

Economic Overview And Outlook: West Virginia

JOBS

- Including July, the private sector has gained jobs nationwide for 17 consecutive months.
- In West Virginia, private sector employment fell by 4.7 percent from January 2008 to February 2010. Since February 2010, private sector employment has grown by 2.9 percent.
- In West Virginia, employees in the manufacturing, construction, and trade, transportation and utilities sectors faced the largest job losses (as a percent of employment within an industry) over the recession. Since the beginning of 2010, the following sectors in West Virginia have experienced the greatest employment increases: mining; professional and business services; and education and health services.*
- As the economy recovers from the Great Recession, service-providing industries are projected to add the most jobs between 2008 and 2018, with the largest gains in professional and business services, education, health care and social assistance, and State and local government. Within the goods-producing sector of the economy, only the construction industry is projected to add jobs above its 2008 level.

EMPLOYMENT

- The unemployment rate in West Virginia was 8.1 percent in July 2011, up 4.0 percentage points from December 2007, but down from its most recent peak of 9.7 percent in December 2010.
- 63,000 West Virginia residents were counted among the unemployed in West Virginia during July 2011.

EARNINGS

- Between the start of the recession in the 4th quarter of 2007 and the 3rd quarter of 2009, inflation-adjusted total personal income in the United States declined 2.2 percent. Most recently, in the 1st quarter of 2011, total personal income is 1.1 percent above its 4th quarter of 2007 level.

- Real per capita personal income (in 2005 \$) in West Virginia was \$29,688.70 in the 1st quarter of 2011, up from \$28,957.30 in the 1st quarter of 2009.

HOUSING

- National home prices, including distressed sales, saw a decrease of 6.8 percent in June 2011 from June 2010 compared to a 6.7 percent decrease in May. In West Virginia, home prices saw a decrease of 1.3 percent in June 2011 from June 2010 following May's year over year decrease of 1.9 percent.
- The median price of single-family homes in West Virginia was \$129,369 in the second quarter of 2010, compared to \$180,176 nationwide.
- As of the 1st quarter of 2011, 2.2 percent of all mortgages, including 7.1 percent of subprime mortgages, were in foreclosure in West Virginia.
- Housing starts in West Virginia totaled 1,820 units (seasonally adjusted annual rate) in June 2011, an increase of 29.1 percent from May.
- Within the South census region, which includes West Virginia, sales of new single-family homes totaled 181,000 units in June 2011, an increase of 3.4 percent from May. Sales of existing single-family homes decreased 2.9 percent to 1,650,000 units (at seasonally adjusted annual rates) from June to July 2011.

EXPLANATION OF NET JOB LOSS AND UNEMPLOYMENT RATE CHART

The chart on the following page shows a comparison of the current (July 2011) unemployment rate and cumulative nonfarm job losses (as a percent of total employment) in each state and the District of Columbia versus the national average. States that appear in the upper right quadrant are experiencing unemployment rates higher than the national average and cumulative job losses greater than the national average. Most of these states were dependent on manufacturing and construction. States in the lower left quadrant are experiencing lower unemployment rates and smaller job losses than the national average.

States in the upper left quadrant experienced net job losses greater than the national average but have a current unemployment rate lower than the national average. Those states all started the recession with unemployment rates less than the national average.

Negative job losses correspond to job creation. North Dakota, Alaska, Texas, and the District of Columbia have experienced net job creation since the recession's onset. Expanded employment in the mining and logging sector has contributed to job creation in North Dakota, Alaska, and Texas. In addition, Alaska, Texas, and the District of Columbia have experienced gains in both the education and health services sector and the leisure and hospitality sector since the recession began. Despite these job gains, the unemployment rate in the District of Columbia is currently higher than the national average. The higher unemployment rate in District of Columbia is partly due to a higher unemployment rate before the recession began – the unemployment rate was 5.7 percent in November 2007, above the national average of 4.7 percent. It is likely, given the small size of the District of Columbia, that jobs created in the District of Columbia are filled by Virginia and Maryland residents.

Net Job Loss from Recession's Onset and July 2011 Unemployment Rate

Unemployment rate above national rate;
Job losses larger than US total

Unemployment rate below national rate;
Job losses smaller than US total

United States:
9.1% Unemployment;
Job losses totaling 4.9%

Unemployment rate above national rate;
Job losses smaller than US total

Unemployment rate below national rate;
Job losses larger than US total

Current Unemployment Rate
