## Economic Snapshot of the States

Although the U.S. economy overall continues its expansion following the Great Recession and associated financial crisis, the recovery can look very different from state to state. The lion's share of economic gains are not only concentrated at the top of the income and wealth distribution, but also in a small share of regions. While some parts of the country have surged ahead, millions of Americans in urban and rural communities are still waiting for their wages to start rising again and struggling to make ends meet.

Despite being in office for nine months, the Trump administration and Congressional Republicans have failed to provide a credible plan to address these challenges and create good paying jobs and increase wages for America's workers. Instead, they have created economic uncertainty fueled by this administration's unprecedented dysfunction.

For most Americans, family financial well-being has little to do with the price of the Dow Jones stock index. The state-by-state snapshots track an array of metrics indicating local economic performance, families' economic security, how well states are preparing for the economic future with investments in people's health and learning, and the costs of living that feature regularly in kitchen table discussions.

This month's release also includes updated preschool and college enrollment data, and updated Medicaid and Children's Health Insurance Program (CHIP) and Medicare enrollment figures.

### Highlights

- Twenty-two states and the District of Columbia lost jobs in September.
- Since the Trump administration took over, 26 states and the District of Columbia have seen workers' wages decline, after adjusting for inflation.
- Across the country, 46 percent of 3 and 4 year-olds are enrolled in nursery school or preschool; enrollment rates vary widely across states, from a low of 28 percent in North Dakota to a high of 66 percent in Connecticut.
- Nineteen percent of Americans receive health care coverage through Medicaid or the CHIP; in some states even more are covered, for example, nearly 1 in 3 residents of New Mexico are enrolled in one of the programs.

### Notes

- Changes in state-level data may not be statistically significant due to sampling variation. Individual monthly readings should be interpreted with caution and in the context of longer-term trends and other data that become available.
- Full-time work at minimum wage assumes a 2,000 hour work year.
- Women's annual earnings as a share of men's depicts the ratio of median annual earnings for women who work full-time compared to men who work full-time.
- Methodology of data collection may vary state to state. The national average for infant childcare costs is calculated by JEC staff using an average of state costs.
- Cost of college attendance includes tuition, room, board, and other mandatory fees for undergraduate students.
- Milk prices are for the region that the state is in and represent the latest available data for each region. The national price includes the average for the continental U.S. only.
