

Economic Overview And Outlook: West Virginia

JOBS

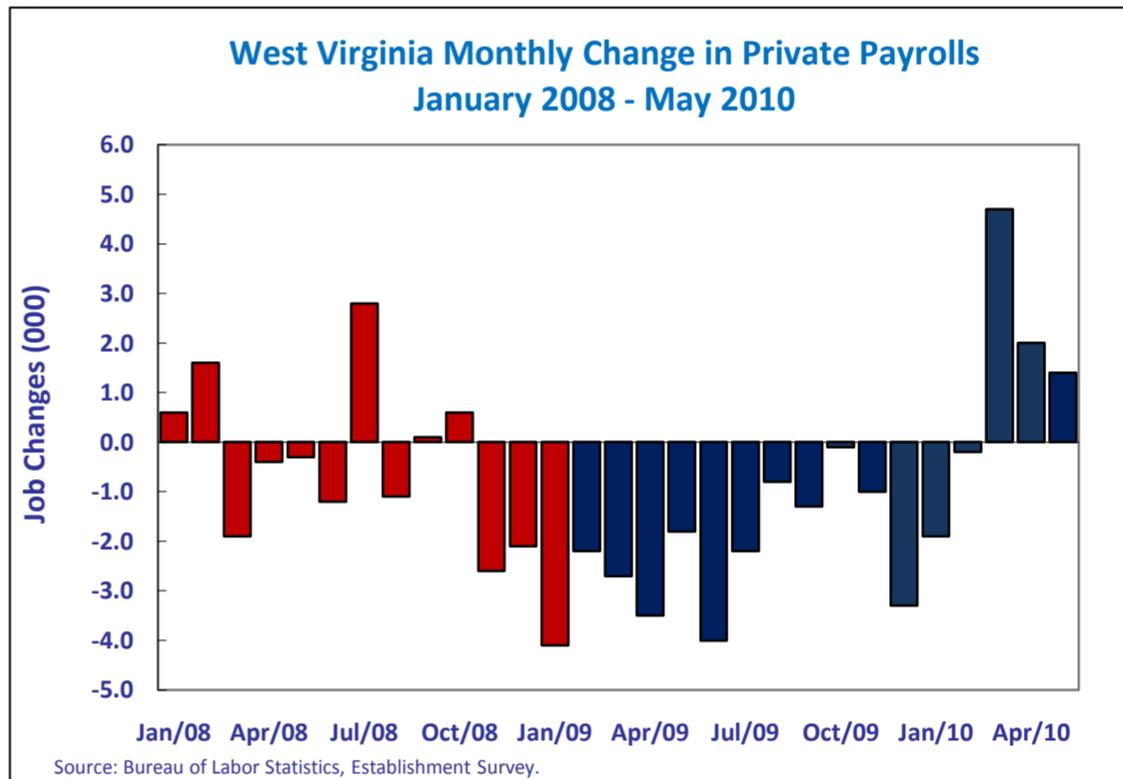

- Across the country, job losses have slowed dramatically since President Obama took office, nearly coming to a halt. Congress and the Administration worked swiftly to pass the American Recovery and Reinvestment Act, which has boosted employment by an estimated 2.8 million jobs since it was enacted.
- The President's Council of Economic Advisers estimates that investments made through the Recovery Act have boosted employment in West Virginia by 14,000 jobs through the 1st quarter of 2010.
- In West Virginia, employees in the manufacturing, construction, and financial activities sectors faced the largest job losses (as a percent of employment within an industry) over the recession. In 2010, the following sectors in West Virginia experienced the greatest employment increases: mining; other services; and leisure and hospitality.
- While job losses nationwide have dissipated, the weakness in the labor market has been compounded by lackluster job creation in the private sector during the previous administration's eight-year tenure.
- As the economy recovers from the Great Recession, service-providing industries are projected to add the most jobs between 2008 and 2018, with the largest gains in professional and business services, education, health care and social assistance, and State and local government. Within the goods-producing sector of the economy, only the construction industry is projected to add jobs above its 2008 level.

EMPLOYMENT

- The unemployment rate in West Virginia was 8.9 percent in May 2010, up 4.9 percentage points from December 2007, but down from its most recent peak of 9.5 percent reached in March 2010.

Sales of existing single-family homes increased 9.6 percent to 1,940,000 units (at seasonally adjusted annual rates) from March to April 2010.

How Does West Virginia Compare To Other States?

Workers across the country have been hard hit by the Great Recession. This chart allows you to compare West Virginia to other states using two metrics.

The current unemployment rate (measured along the horizontal axis) serves as a gauge of current labor market conditions faced by residents, while the proportion of jobs lost within West Virginia over the course of the recession (shown along the vertical axis) measures the toll the recession has taken on the job supply in West Virginia.

States falling in the upper right quadrant have lost a disproportionate share of jobs, relative to the total United States, and have unemployment rates higher than the national unemployment rate. States falling in the lower left quadrant have unemployment rates lower than the national average and smaller job losses over the recession.
