LETTERS OF TRANSMITTAL

AUGUST 30, 1961.

Members of the Joint Economic Committee:

Transmitted herewith for use by the Joint Economic Committee and other Members of the Congress is a staff report titled "Ninety-three Lots of Bids Involving Identical Bids Reported by the Federal Procurement Agencies in the Years 1955-60."

This report has been prepared in response to the committee's deep interest in the subject matter, most recently expressed in our resolution of March 14, 1961, recommending to President Kennedy that he issue an Executive order requiring public reporting of all lots of bids involving identical bids made to the Federal procurement agencies, and inviting publication of similar bids made to the State and local governments.

It is understood, of course, that any statements made in this report do not necessarily represent the views of the committee or any of its individual members.

Respectfully submitted.

WRIGHT PATMAN, *Chairman.*

AUGUST 30, 1961.

HON. WRIGHT PATMAN,
*Chairman, Joint Economic Committee,
House of Representatives, Washington, D.C.*

DEAR MR. CHAIRMAN: Attached is a staff report titled "Ninety-three Lots of Bids Involving Identical Bids Reported by the Federal Procurement Agencies in the Years 1955-60," which has been prepared under your direction and guidance and that of the vice chairman, Senator Douglas.

The work of selecting the sample and listing the pertinent information from the abstracts of bids reported to the Department of Justice has been performed by the Antitrust Division of the Department of Justice and by the Bureau of the Census of the Department of Commerce. Explanatory notes prepared by the committee staff appear in the introduction.

Respectfully submitted.

WM. SUMMERS JOHNSON,
Executive Director.

INTRODUCTION

This report presents a small sample of identical bids received by Federal procurement agencies under the advertised, competitive [sealed-bid] procedure during the 6-year period, 1955-60. The report has been made by the Department of Justice, with the assistance of the Bureau of the Census, in response to requests made by the committee's chairman and vice chairman.

While the subject matter of this report deals with only one aspect of the committee's longstanding concern with Government contracting and procurement practices, this aspect is not of small importance. Over the past 10 years purchases of goods and services by the Federal, State, and local governments have accounted for roughly 20 percent of the value of all goods and services produced in the Nation. Thus in 1960, when the value of all goods and services produced (GNP) totaled \$504.4 billion, Government purchases accounted for \$100.1 billion. [Federal purchases totaled \$52.9 billion, while State and local purchases accounted for \$47.2 billion.]

For many years the laws governing Federal purchases, and contracts to purchase, have required the Federal agencies to make reports to the Attorney General concerning bids received under the advertised, competitive bid procedure where, in the opinion of the agency head, the antitrust laws may have been violated. These bids have generally not been made public, although by our national traditions public posting of all public bids, suspect or otherwise, has been customary. Such has been the traditional safeguard, until recent years at least, against favoritism and other improprieties in government.

In view of the large role which Government purchases play in the economy, their cost to the taxpayer, and piecemeal evidence which suggests that identical bidding has become a common and widespread phenomenon, the committee adopted a resolution, on March 14, 1961, recommending that the President issue an Executive order to—

(a) require the Federal agencies to make a report to the Attorney General on each lot of bids received under the advertised, competitive bid procedure in each case where two or more of the bids are identical;

(b) invite the State and local governments to make similar reports to the Attorney General concerning such bids received by them; and

(c) require the Attorney General to make frequent public reports of all such lots of bids, giving the names of the companies making the bids and other pertinent details.

ORIGINS OF THE REPORT

At about the time this resolution was adopted the committee's chairman and vice chairman held a number of conferences with officials of the Department of Justice and met with President Kennedy concerning procedures for implementing the resolution. In addition,

the chairman [Mr. Patman] introduced a bill [H.R. 4570, now H.R. 8603 ¹] which would write the suggestions for public reporting into law and thus make such reporting a continuing feature of the Federal Government.

The committee's resolution made no suggestion for changes in the antitrust laws, either as to their scope or as to the penalties provided for violating these laws. Rather, it was predicated on the belief that public information and publicity concerning identical bids, if such could be obtained, would be a powerful force for correcting bad practices in the conduct of the public's business.

Executive Order No. 10936, issued on April 24, carried out the main purposes of the committee's recommendation, at least as the recommendation relates to bids submitted to the Federal agencies and relates also to offers to sell goods or services, as contrasted with offers to purchase surplus supplies, securities, or other public assets. By the terms of Executive Order No. 10936, the Federal agencies must report to the Attorney General all lots of bids involving two or more identical bids received after the effective date of the order. [Bids involving purchases valued at less than \$10,000 are excluded.] Further, the Attorney General is to make public reports from time to time, giving the names of the bidders, the commodities for which the bids were made, the prices bid, and other pertinent details. Presumably the first public report will be made in due time.

The listings of bids appearing in the present report have not, however, arisen from Executive Order No. 10936. Rather they have been prepared from abstracts of bids already in the files of the Department of Justice, having been reported by reason of requirements of existing law.

An early effort to have the Federal procurement agencies make reports to the Attorney General concerning identical bidding was made in 1936, when the President requested, by letter dated June 20, 1936, the Federal agencies to report all collusive or identical bids. According to recent testimony of the Assistant Attorney General in charge of antitrust, this arrangement "was followed for 8 months or more by practically all agencies, and by some agencies for longer periods of time." ^{1a}

With the passage of the Armed Services Procurement Act of 1947, however, the military agencies were directed by law to make reports to the Attorney General concerning all bids received under the advertised, competitive bid procedure where, in the opinion of the agency head, the bids evidenced a violation of the antitrust laws. Further, with passage of the Federal Property and Administrative Services Act of 1949, the other Federal agencies were placed under a like statutory requirement. All Federal agencies have thus been making reports, after a fashion, since 1949.

The fashion has decidedly changed, however, from that adopted in the first years following passage of the acts of 1947 and 1949. In 1950 and 1951, the Federal agencies reported, respectively, 3,985 and 3,569

¹ H.R. 8603 was reported by the Committee on Government Operations of the House on Aug. 17, 1961, and passed by the House on Aug. 22, 1961.

^{1a} Hearings before the subcommittee of the Committee on Government Operations, House of Representatives, 87th Cong., 1st sess., on H.R. 4570, p. 54.

instances of identical bids. In 1952, however, the number dropped to less than half that of the prior year; and in subsequent years only token numbers have been reported. According to records of the Department of Justice, the number of reports received each year has been as follows:

Calendar year:	Number of reports	Calendar year—Continued	Number of reports
1948.....	16	1955.....	167
1949.....	510	1956.....	89
1950.....	3,985	1957.....	56
1951.....	3,569	1958.....	78
1952.....	1,506	1959.....	239
1953.....	29	1960.....	85
1954.....	31		

¹ Covers the period May 19, 1948, to Dec. 31, 1948.

² Excludes 1 report from the Government Printing Office.

Source: "Identical Bids to Public Agencies," hearings, subcommittee of the Committee on Government Operations, House of Representatives, 87th Cong., 1st sess., H.R. 4570, Apr. 25 and May 11, 1961, p. 127.

Explanation for the decided drop in the number of identical bids reported is not to be found in a corresponding reduction in Federal purchases, nor does it seem likely that the bidding practices of business firms have radically changed since 1951. Rather, the explanation is to be found in efforts on the part of the Department of Justice to reduce the volume of such reports. According to testimony of the Assistant Attorney General, representatives of the Antitrust Division of the Department of Justice held a series of conferences with certain of the Federal agencies in early 1952, as a result of which agreements were reached to eliminate reporting of identical bids except in those instances where the procurement agencies are able to supply additional, substantiating evidence that the antitrust laws have been violated.²

The laws governing Federal agency purchases, and contracts to purchase, prescribe the use of the advertised, competitive bid method, as the general rule, and provide for placing contracts or purchases by negotiation only in exceptional circumstances. In actual practice, however, the Federal agencies most usually negotiate their contracts and use the advertised bid method only in the rather exceptional case. Thus in the 6 fiscal years, 1955-60, the Federal agencies used the advertised, competitive bid method in only 11 percent of their procurement actions. These involved only 18 percent of the value of their procurements.³

Even so, the absolute volume of Federal procurements made under the advertised bid procedure are not inconsequential. On the contrary, in the 6 fiscal years, 1955-60, the Federal agencies made almost 5 million procurements under this procedure, involving the purchase of more than \$24 billion of goods and services. Total Federal pro-

² Hearings, already cited, pp. 55 and 56.

³ Procurement actions to \$25 or less are omitted; such procurements are thought, however, to account for an inconsequential percentage of the total value of Federal procurements.

curements, and those procurements made under the advertised, competitive bid procedure in these years, are shown in table 1, below.

LIMITATIONS OF THE SAMPLE

Following adoption of the committee's resolution in March, the Department of Justice was requested, initially, to provide the committee with a complete listing of all the reports, or abstracts, in the Department's files, from the beginning of the reporting program in 1947 or 1948. The staff of the Antitrust Division felt, however, that such an undertaking was beyond their capacity and, indeed, expressed the view that to make a listing of any extensive nature would not only be onerous, but would possibly force the Division to suspend its antitrust work. Accordingly, the request was modified to accommodate what seemed a minimal workload. Specifically, the suggestion finally made was that the staff simply pull every fifth abstract in the files for the years 1955 through 1960 and provide the committee with mechanically reproduced copies of these. This suggestion has eventuated in the listing of the 93 abstracts which appear in this report.

The circumstances under which these 93 abstracts were selected do not suggest that these abstracts are representative, either of the volume or the kinds of identical bids actually received by the Federal agencies during the years in question. Indeed, they may be more significant to a case study of the Federal agencies' performance under their statutory duties than to a case study of bidding practices in American industry.

In the subsequent pages of this report, information from the 93 abstracts in question is arranged, first, by major industry group, and, second, by more specific product group. The names of the companies making the bids are given, as are the quantities of the product or products involved, the unit prices bid, plus certain other pertinent details, including, in many instances, footnote information as to the disposition of the bids. It might be said, however, that exact copies of the abstracts in the files of the Department of Justice were not directly usable for such a listing as is here presented. It appears that

the Department had never developed a standard form for use by the various procurement agencies in making the reports, nor, as for that matter, even a standard list of the items of information which the Department might wish to have reported. As a result, the various Federal departments and bureaus have pursued a wide variety of reporting practices, reflecting differing ideas as to what information should be reported as well as the form in which the items should be arranged. Thus it would be difficult, at best, to compare pertinent items of information from bids submitted to two different Federal bureaus by the same companies for the same products.

In view of the unusable state of the abstracts and the incapacity of the Antitrust Division to transcribe pertinent information from these abstracts to a uniform listing, the committee's vice chairman (Mr. Douglas) appealed to the Bureau of the Census for assistance in making the transcriptions, and that Bureau obliged.

As to an appraisal of the sample of 93, however, several obstacles present themselves.

First, records with the Department of Justice show it received from the Federal agencies a total of 711 reports, or abstracts, in the years 1955 through 1960. Every fifth of these, or a sample of 20 percent, should yield a sample of 142 or 143 abstracts. As applied by the Antitrust Division, the procedure somehow produced an initial sample of only 95 abstracts, which suggests that one-third of the Department's abstracts were "out of the files" or otherwise unaccounted for when the sample was drawn. [Of the 95 abstracts in the initial sample, 2 were not listed for reasons explained in the Attorney General's transmittal letter appearing in the pages to follow.]

Second, in view of staff limitations in the Department, it has not seemed feasible to seek a sample stratified on the basis of industry or product, so as to assure that all industries or all products for which identical bids have been reported would be represented in the sample.

The filing practice which has been followed in the Antitrust Division has been to put the abstracts into its files, as received, in the order of the date received. Thus, the sample of 93 shows that the Department of Interior reported identical bids for heavy electrical equipment in the first year covered by the sample, 1955, and again in the years 1956, 1957, 1958, 1959, and 1960, although these reports all appeared at different places in the file. In these circumstances, pulling each fifth abstract as it appears in the file would normally yield a sample in which particular industries and products are represented in the same frequency with which they have been reported. In the present instance, however, it would not be safe to assume that such representation exists, because of the uncertainty that all files were sampled.

Furthermore, it is not possible to compare the distribution of the sample among industries or products with total Federal purchases from the different industries or product groups. The reason, it could be said, is that the Federal Government does not know what it is buying. Although the Bureau of the Budget has long sponsored continual modernization and refinement of the standard industrial classification, and a variety of sales and other Government reports required of business are in terms of the standard industry and commodity classification thus provided, no requirement has been made that the various Federal agencies adopt this standard or any other uniformity for reporting their purchases from business firms. Ac-

cordingly, no consolidated report on the basis of meaningful commodity groups is available for the Federal agencies, and none can readily be made.

While there is no direct evidence to suggest that the sample of 93 is unrepresentative of the commodities for which identical bids have been reported, other comparisons do suggest that the sample is not representative as to the Federal agencies which have submitted reports to the Department of Justice.

The Department's records show that of the 711 abstracts received in the 6-year period, 21 percent came from the Tennessee Valley Authority; yet no abstract from TVA showed up in the sample.

Conversely, 42 percent of the Federal agency abstracts submitted to the Department came from the Department of the Interior, but abstracts from this source accounted for 67 percent of the total sample.

Abstracts from the Department of the Army accounted for 21 percent of all abstracts submitted, but only 11 percent of the abstracts in the sample.

INADEQUACIES IN PROCUREMENT AGENCY REPORTING

Even more serious questions arise when comparisons are made between the number of abstracts reported by the various Federal agencies and the volumes of procurement actions made by these agencies. Forty of the Federal agencies made no report whatever to the Department of Justice in the 6-year period, although these agencies made more than 757,000 procurements under the advertised, competitive bid procedure during the period.

Interestingly enough, the Department of Justice made approximately 302,000 procurements under the advertised bid procedure and received no bid it considered to warrant reporting to its Antitrust Division. The Department of Agriculture made approximately 245,000 procurements, and made no report of irregularities in the bidding. The General Services Administration, which buys an especially wide variety of goods, made more than one-half million procurements under the advertised bid procedure, but made only four reports to the Department of Justice. The Veterans' Administration accepted bids for more than 1 million procurements and made only one report to Justice. [This concerned a procurement, in June 1955, of a supply of one of the "wonder" drugs, tetracycline, from three manufacturers who have recently (August 1961) been indicted on charges of "maintaining unreasonably high and noncompetitive prices and monopolizing the production and distribution" of this drug since November of 1953.]⁴

Table 2, below, shows the number of procurement actions each of the Federal agencies made under the advertised, competitive bid procedure in the fiscal years 1955-60, and the number of reports each agency made to the Department of Justice in the calendar years 1955-60. The table also shows the number of bid abstracts appearing in the report sample of 93. As will be evident, relatively few of the Federal agencies made any report of any suspect bids in the 6-year period.

⁴ Department of Justice public release, Aug. 17, 1961.

CHARACTERISTICS OF THE REPORT

Although the form in which the information is presented in this report has been the subject of some experimentation, further consideration will doubtless suggest ways by which future reports can be improved to facilitate reading and comparisons.

Even as to the present form, however, it will be apparent that the abstracts in many instances do not contain the minimal pertinent information. To illustrate, the names of corporate divisions or regional offices are frequently given as the name of the bidder. Useful as such specific information may be, omission of the corporate name tends to obscure the frequency with which a particular corporation is the subject of reports of suspect bidding. Further, the manufacture or warehouse point from which goods are to be shipped, a highly pertinent question both in the case of prices quoted f.o.b. manufacturing point and those quoted delivery to destinations, is shown only infrequently.

In many instances bids cover several items, in which case each item stands as a separate bid, except insofar as a particular bidder is concerned, the bidder bids "all or none." The different items appearing on a single bid may refer to different quantities, to different places or times of delivery, or to products of widely different values, although carrying the same general description. Yet information which would distinguish one item from another has frequently not been reported. For example, abstract No. 48 concerns a bid for five different items of "instrument transformers." These range in price from \$163.80 each to \$1,500 each (on the basis of low bids) and evidently refer to widely different types or sizes of "instrument transformers," but distinguishing information is missing.

In some instances, in the case of bids for several items, the bidders have submitted identical bids for one or more of the items, while submitting a range of bids for one or more of the other items. In all cases, in the column of the report headed "Identical bid," a bid is labeled "Yes" if it is identical with any other bid received in the same bid lot. Thus in some instances two or more bidders have bid one price, while two or more other bidders have bid another price, in which case there are two "identical" prices. In such instances all bids are labeled "Yes" on the question whether they are identical bids. It might be observed, too, that the bidder who has bid a distinctive price is by no means always the low bidder. In fact, the low bid is frequently that which has been submitted by a majority of the bidders, and the few distinctive bids are the high bids.

Almost invariably, identical bids reported to the Department of Justice quote prices on the basis of goods "delivered to destination." Bidding "delivered prices" might be said to be, by definition, an essential feature of identical bids. Public concern with identical bidding does not, of course, have to do with the mere likeness of separate features of the bids. It has to do with situations where, all features considered, the buyer is offered no cost advantage by which he would do business with one bidder rather than another. In short, the real question is whether competition has been suppressed, either through understandings to quote identical prices, and thus to divide the business on a random basis, or through agreements to allocate markets in specific ways by more complicated arrangements for rotat-

ing bids. Where sellers are actively competing, it is irrelevant whether the cost advantage each seller seeks to offer the buyer is expressed in terms of quoted price, cash discount, or in any other element of cost to the buyer.

Nevertheless, "identical bids" have been reported in a few instances where the price quotations were f.o.b. mill and the procurement agency would obviously incur substantially different freight costs for shipping the goods from the different mills to the place where the goods were wanted. Such is the case of a few bids for Portland cement. Since the Supreme Court's famous basing point decision in the *Cement* case, it appears that in some instances cement bids have all quoted a Federal agency f.o.b. mill prices, and in other instances cement bids have all quoted delivered prices.

Where the abstracts are perhaps most deficient is on the matter of information as to what disposition has been made of the bids. A large percentage of the abstracts fail to give any information on the subject.

The most usual procedure seems to have been, however, for the Federal agencies to award the bid by lottery among identical bidders. Thus a large percentage of the Federal Government's vast amount of business is done by putting the names of the bidders into a hat, or the equivalent, and drawing a name blindfolded. In some instances the question of which firm receives the award is resolved by Federal procurement regulations which assign certain priorities where bids are otherwise equal. First priority goes to companies located in "labor surplus areas." Thus if there are several "low" bidders and one of the firms is located in a "surplus labor area," the contract goes to that firm—provided the contract in question is of a type which the procurement agency has classified as a "surplus labor area" type contract. Second priority goes to "small business" concerns. Under present regulations, however, a "small business" is, with minor exceptions, defined as one having less than 500 employees, and the "small business" preference thus applies only rarely.

In a few instances, information contained in the abstracts indicate that bids have been rejected on the ground that they were not made "independently." For the most part, however, there is either no additional information, or the information supplied is cryptic and sometimes puzzling. For example, in one instance [abstract No. 45], a military procurement officer received four low bids, all identical as to quoted price, but one offering a 1-percent discount for payment within 10 days, whereas the others offered no discount. The single bidder offering the discount was low bidder, at least in theory, but the procurement officer rejected the four bids, apparently because he felt the bids were not independently arrived at, then awarded the bid by lottery among the four. One of the three who had not offered the discount was the lucky recipient of the contract.

Neither law nor military regulation requires a Federal procurement officer to reject bids which he suspects, or even knows, have "not been independently arrived at."⁵ The regulations only permit him to do so. More specifically, the regulations permit either of two courses of action. One, the procurement officer may reject the bids and either issue invitations for new bids or place the contract by negotiation.

⁵ Armed Services Procurement Regulation 2-403.

Second, he may award the contract to one of the low bidders by lottery. In the latter case, the regulations are quite explicit as to how the lottery must be conducted. Three Government officials must be present at the drawing, and all of the "tied" bidders must be notified in advance and given an opportunity to witness the drawing. No flexibility is permitted the procurement officer to experiment with procedures which might break up the identical bidding practice, such as awarding the bid to the smallest bidder in terms of net worth, assets, or other criteria.

Finally, it should be emphasized that the sampling procedure used for this report may have divorced particular abstracts from related abstracts which, when taken together, reveal a pattern of bidding not apparent from the single abstract. The laws and procedures under which the Federal agencies make reports to the Department of Justice do not call for reports on identical bids, as such, but for reports on all bids which the Federal procurement agencies believe to evidence a violation of the antitrust laws. Thus, in at least one instance, a set of identical bids was rejected not because the bids were identical, but because the price was "unreasonably high." No doubt procurement officers who are well versed in their field of procurement, can, with good grounds, identify instances of bid "rigging" where the bids are not identical. Finally, a random sampling of bids such as is present here could not be expected to cast light on patterns of systematic alternations of low bids, where such may exist.

Despite the limitations of the sample and the inadequacies of Federal agency reporting, it is apparent that suspect bidding has occurred in a wide range of products and services. Inspection of the sample of 93 abstracts shows that Federal procurement agencies have reported to the Attorney General instances of suspected bid rigging in every major product and service category. The abstracts begin with such bids for "rock salt" and end with such bids for "care" of the Navy dead, prices quoted delivered to destination at 50 cents per mile, one-way mileage. Summary data for the whole range of products and services are given in the following letter from the Assistant Attorney General in charge of Antitrust.

DEPARTMENT OF JUSTICE,
Washington, June 7, 1961.

HON. WRIGHT PATMAN,
*Chairman, Joint Committee on the Economic Report,
U.S. Congress, Washington, D.C.*

MY DEAR CONGRESSMAN PATMAN: In response to the oral request made by you and Senator Douglas some weeks ago, preceding the issuance of the President's Executive Order 10936, Reports of Identical Bids, we are transmitting herewith a tabulation made by the Bureau of the Census of a sample survey of all abstracts of identical bids submitted by procurement agencies to the Antitrust Division under existing statutes during the 6-year period, 1955-60. The sample covered a total of 95 abstracts drawn on the basis of every fifth submission presently in the files. Two of the abstracts were not tabulated. Abstract No. 16 (Zinc oxide, Navy) was omitted because it duplicates part of abstract No. 15. Abstract No. 41 (Trashracks, Interior) was omitted because only 2 bidders of the 64 small business bidders submitted an apparently fortuitous identical bid. While the number of abstracts tabulated totaled 93, the actual number of items bid upon would be many times this number.

The tabulation was limited to the information contained in the abstracts. Because information is very often incomplete in the abstracts, it has been assumed that bids were made on the basis of "F.o.b. destination, terms net" unless otherwise indicated. Also, the detailed description of each item involved has been shown only when it was specified on the abstract.

The abstracts have been sorted according to industries, as indicated in the table of contents attached to the tabulation.

As you may note, this sample of 93 abstracts covers a wide array of products, including rock salt, dairy products, compressed yeast, fiberglas cloth, filing cabinets, copper sulfate, sodium fluoride, solvent, tetracycline hydrochloride capsules, laundry detergent, zinc oxide, carbon dioxide gas, dry ice, weed control chemicals, bus and switch insulators, suspension insulators, cement, quicklime, metal abrasive grit, corrugated metal pipe and couplers, steel die block, aluminum bars, shapes and sheets, bushing potential devices, copper cable, steel angles, anchor rods, hydraulic turbines, irrigation pumping units, vacuum cleaner attachments, transformers, yoke assemblies, watt-hour demand meters, switches, coupling capacitors, cement, lime traps, lightning arresters, batteries, circuit breakers, levels, microscopes, photographic paper and films, blueline prints, construction of rock dikes, preformed packing, towel service, laundry flatwork, and care of remains of Navy dead.

Divided according to two-digit industries, the distribution of the abstracts was as follows:

Industry:	<i>Number of abstracts</i>
Minerals.....	1
Food and kindred products.....	4
Textile mill products.....	3
Furniture and fixtures.....	1
Chemicals and allied products.....	12
Stone, clay, and glass products.....	12
Primary metal industries.....	8
Fabricated metal products.....	1
Machinery, except electrical.....	3
Electrical machinery.....	36
Instruments and related products.....	7
Construction and miscellaneous.....	2
Services.....	3
Total.....	93

As the above tabulation shows, the electrical machinery industry led all others with a total of 36. Two other industries also figured prominently—chemicals and allied products with 12 and stone, clay, and glass products with 12. Most of the identical bids included in the stone, clay, and glass industry were for insulators and for cement and lime. Eight abstracts in the primary metals industries consisted largely of aluminum shapes, copper cable, and steel angles. Instruments and related products, with seven identical bid abstracts, included levels, microscopes, and photographic papers and films. Among the abstracts in the food and related products industry were identical bids on dairy products and compressed yeast.

Of the various procurement agencies submitting identical bid abstracts, the sample indicates that two-thirds have come from the Interior Department, notably from the Bureau of Reclamation and Bonneville Power Administration. Less than one-third of the abstracts sampled came from the defense agencies.

If we may be of further assistance, please call upon us.

Sincerely yours,

LEE LOEVINGER,
Assistant Attorney General, Antitrust Division.

¹ Not available.

² Awarded to Upjohn as most advantageous bid, discount considered, for period Apr. 1 through June 30, 1955.

³ No award.

⁴ Awarded to all companies for period July 1-Dec. 31, 1955.

⁵ Awarded to Bristol, on a draw for period Jan. 1-June 30, 1956, and decentralized to depots for their use in maintaining stock.

⁶ Awarded Pfizer as low bidder, 1 delivery for each depot. No award on balance.

⁷ McKesson indicated by phone that they could furnish either Pfizer's or Lederle's material. Award pending.

⁸ In order to maintain an adequate supply of this item to meet our current requirements, award for 1/2 of the quantity was made to the Charles Pfizer & Co., Inc., who was the low bidder.

The Armed Services Medical Procurement Agency purchased by competitive bid 94,176 bottles of tetracycline hydrochloride tablets, 250 milligrams, at a price of \$11 per bottle. The item was awarded to the Lederle Laboratories as the lowest bidder on their Bid Invitation No. MPA-30-287 md 57-213 which was opened Oct. 5, 1956. The same firms quoted on requirements for both the Veterans' Administration and the Armed Services Medical Procurement Agency.

Except for the bid of Charles Pfizer & Co., Inc., of \$17.63 to the Veterans' Administration, \$11 by the Lederle Laboratories, and approximately \$19 by Bristol Laboratories to the Armed Services Medical Procurement Agency, the other bidders quoted identical net prices to both agencies. The list prices as quoted in the manufacturer catalog are identical for either capsules or tablets and the Lederle Laboratories advised that the prices are identical to the Government for either capsules or tablets.
